\$28,000+ PRIZE POOL

THE OFFICIAL HACKATHON AT MILAN AI WEEK 2026

AI AGENT OLYMPICS HACKATHON

LOCATION

MILAN, ITALY

ONLINE PHASE

13–19 MAY, 2026

ON-SITE PHASE

19–20 MAY, 2026

Wednesday, May 13 2026 - 11:00 AM Argentina Standard Time

AI Agent Olympics Hackathon

The Official Hackathon at Milan AI Week 2026

🕒 Build the next generation of Autonomous Agents in the heart of Europe's AI Revolution.

 **May 13 – 20, 2026**

May 13 – 19: Online Build Phase.

May 19: An exclusive on-site build day at [Milan AI Week](#) for selected participants.

May 20: Demo Showcase & Awards Ceremony.

📍 On-site Venue (May 19–20):
[Fiera Milano \(Rho\), Milan, Italy](#)

👤 Join solo or with a team.

💰 \$28,000+ prize pool

👤 Apply now to turn your autonomous agent into a market-ready enterprise solution.

✓ Enrolled

About

[AI WEEK](#) brings together over **700** international speakers, **250+** AI Exhibitors and **25,000** +attendees across 10 stages, uniting managers, entrepreneurs, engineers, researchers, and innovators shaping the future of technology.

Through keynotes, masterclasses, and real-world case studies, the event explores how AI is redefining competitiveness, sustainability, and global enterprise.

Hosted during AI WEEK, Europe's largest event dedicated to Artificial Intelligence — The **AI Agent Olympics Hackathon** transforms conversation into creation.

Media & Community partners

DevIT:>_

DevITJobs.uk

Challenge

Design and deploy autonomous AI agents that move beyond copilots — into real decision-making systems that create measurable enterprise value.

Choose a track that matches your vision:

 **Intelligent Reasoning** Use advanced reasoning to analyze inputs and make independent decisions. Your agent should be able to handle roadblocks and change its plan without human intervention.

 **Agentic Workflows** Design workflows where the agent plans its own steps, calls external tools (APIs, databases, or browsers), and manages multi-step tasks over time.

 **Enterprise Utility** Solve a real-world friction point for the managers and entrepreneurs at AI Week.

 **Multimodal Intelligence** Leverage the ability to process images, documents, audio, or video to unlock richer interactions— such as analyzing business reports or physical environment data.

 **Collaborative Systems** Build a multi-agent system where different specialized agents coordinate and share information to achieve a high-level goal that a single LLM couldn't handle alone.

Technology Partners

[Vultr](#) powers the backend infrastructure for this hackathon.

Teams that deploy on Vultr and use it as the central system of record for planning, coordination, and execution will be eligible for the **Vultr Awards**.

Challenge:

Build a Web-Based Enterprise Agent Deployed on Vultr

Design and develop a web-based AI agent built for real-world enterprise workflows across operations, sales, marketing, customer support, HR, and beyond.

Projects should demonstrate **multi-step agentic workflows**, realistic future-of-work use cases, and **a production-style web application**.

Developer Expectations

Each team must provide:

- ✓ GitHub repository with setup and documentation
- ✓ Vultr VM backend deployment
- ✓ Public demo URL
- ✓ Recorded demo video
- Clear explanation of architecture and use case

Technology

- Use any programming language or framework
- Use open-source LLMs and retrieval-augmented generation workflows
- Vultr Serverless Inference is available for eligible projects

⚠ **Note:** Vultr GPUs are not available for this event.

 DeepMind

 Google AI Studio

Gemini is Google's family of next-generation **multimodal AI models** capable of reasoning across text, images, code, video, and audio. It enables developers to build powerful **AI agents and intelligent systems** for real-world applications.

Google AI Studio is a browser-based environment where developers can easily **prototype, test, and iterate** with Gemini models before integrating them into production using the Gemini API.

Challenge:

Build intelligent agents or applications using **Gemini models and Google AI Studio**.

Your project should:

- Use Gemini via Google AI Studio or the Gemini API for reasoning, chat, or multimodal understanding
- Implement agent-driven or automated workflows that respond to user input, data, or context
- Demonstrate practical value through a working prototype or intelligent system

Recommended Gemini Models:

Participants are encouraged to select the Gemini model that best fits their agent use case:

- **Gemini Flash:** Optimized for speed and low latency. Ideal for real-time applications, chat systems, and responsive agent workflows.
- **Gemini Pro:** Designed for advanced reasoning and complex decision-making. Ideal for multi-step workflows, analysis, and enterprise-grade agents.

Example Use Cases:

- AI copilots and enterprise assistants
- Agentic commerce and workflow automation
- Multimodal applications using text, image, audio, or video understanding
- Research, analysis, and decision-support systems
- Customer support and conversational AI experiences

Access to Technology:

Participants can explore Gemini through two main options, both of which include **free access**.

- **Google AI Studio:** A free, browser-based IDE for experimenting with Gemini. You can write prompts, test outputs, tweak parameters, and prototype without setting up billing or API keys. Ideal for prototyping during the hackathon.
- **Gemini API:** For developers ready to integrate Gemini directly into their apps. The free tier includes a monthly allowance of tokens for text and multimodal inputs/outputs, allowing participants to build and test with Gemini models at no cost.

 **Google Cloud Credits:** New Google Cloud accounts receive **\$300 in free Google Cloud credits**, valid for 90 days.

These credits can be used across eligible Google Cloud services, including Gemini API usage, subject to Google Cloud's standard terms

and regional availability.

👉 [Learn more about Google Cloud's free tier](#)

How to Get Started:

1. Visit the [Gemini docs](#)
2. Follow the [Quickstart Guide](#) to explore Gemini in AI Studio
3. Experiment with multimodal prompts
4. Build and test your agent or application

Resources:

- [Gemini API models](#)

- [Google AI Studio quickstart](#)
- [Antigravity](#)

[Kraken](#) is one of the most established cryptocurrency exchanges in the world, trusted by institutions and individual traders, and known for its deep liquidity and trading infrastructure.

For this hackathon, participants will work with two Kraken products:

- [Kraken CLI](#) is an AI-native command-line interface for programmatic trading. It handles exchange complexity such as authentication, rate limiting, and order management so you can focus on your agent's strategy logic.
- [xStocks](#) are 1:1 asset-backed tokenized U.S. equities and ETFs that can be traded 24/7 on-chain.

Challenge:

Build an autonomous AI agent that trades **xStocks**, tokenized U.S. stocks and ETFs, using the **Kraken CLI** as its execution layer.

Your agent should analyze market signals, form a strategy, and execute trades programmatically without manual intervention. This could include a momentum-based stock picker, portfolio rebalancer, or event-driven trading system.

How Agents Are Ranked:

Agents in the Kraken Challenge are evaluated across **two independent categories**.

1 Trading Performance (PnL)

Agents are ranked purely by net PnL, realized plus unrealized, over the competition period.

How it works:

- **Submission:** Each participant provides a read-only Kraken API key linked to their trading account. This allows lablab.ai and Kraken to view trade history. No execution or withdrawal access is granted.
- **Audit:** Kraken performs a final audit on top agents before prizes are distributed.
- **Ranking:** Winners are determined solely by net PnL at the end of the competition window.

Requirements:

- Agents must use Kraken CLI as the execution layer
- One submission per participant or team

2 Social Engagement

Build in public. Share your journey. Inspire the community.

Over a 30-day window, participants earn a Social Engagement Score based purely on quantitative metrics from public platforms, including Twitter/X, YouTube, blogs, or other channels.

How winners are determined:

- lablab.ai tracks engagement metrics such as impressions, likes, shares, and reach across linked social accounts
- Rankings are determined purely by quantitative data with no subjective judging
- Participants can monitor their position throughout the competition window

Surge

X: [@Surgexyz_](#)

How to Get Started

1. Install the Kraken CLI from the official repository
2. Configure your Kraken API access and connect it to your agent
3. Ensure you have access to the xStocks market
4. Build an autonomous AI trading agent that analyzes signals and trades xStocks through Kraken CLI
5. Share your progress publicly as part of the Social Engagement challenge

Resources

- [xStocks Documentation](#)

Featherless

[Featherless](#) provides serverless inference for **27,000+ open-source models** through a single OpenAI-compatible API, with no GPU management. It enables developers to build and deploy **specialized AI agents** quickly and efficiently.

Challenge:

Build a **domain-specialized, open-source AI agent** using models from the Featherless catalog.

Instead of building general-purpose assistants, focus on creating an agent that performs **one task exceptionally well** within a specific domain.

What We're Looking For:

- **Domain-Specialized, Not Generalist:** Choose a real-world domain such as legal, medical, logistics, finance, research, code review, content moderation, or localization.
- **Async-First Architecture:** Build agents that operate in the background, such as scheduled workflows, document pipelines, monitoring systems, or event-driven tasks.
- **Fully Open-Source:** Release your agent under a permissive license such as MIT or Apache 2.0, with prompts, orchestration, and

deployment reproducible.

- **Production-Shaped:** Build something deployable, well-documented, and usable beyond the hackathon.

Access to Technology:

Featherless will provide **\$25 in credits per participant**, available to up to **1,000 participants** on a first-come, first-served basis. Access is valid for **1 month** from activation.

👉 **Access details and setup guide will be shared during the kickoff stream.**

🚀 How to Get Started with Featherless:

1. Open the setup guide using the link above
2. Scan the QR code or follow the signup link inside the guide
3. Create your account and activate your free Premium access
4. Generate your API key from your account dashboard
5. Choose a model from the catalog and start building

SPEECHMATICS

[Speechmatics](#) provides highly accurate **speech-to-text and conversational AI technology** built for AI agents, voice applications, assistants, and real-time workflows.

For this hackathon, participants are encouraged to build AI systems powered by **real-time speech understanding** using Speechmatics APIs.

Challenge:

Build conversational AI applications, voice-powered agents, or real-time AI systems using Speechmatics speech-to-text technology. Speechmatics is especially interested in projects leveraging **real-time transcription APIs** within AI agent workflows, assistants, collaboration

tools, accessibility tools, healthcare, customer support, and other voice-first experiences.

Participants are encouraged to build projects involving:

- Real-time conversational AI agents
- Voice-powered copilots and assistants
- AI meeting, interview, or call summarization tools
- Speaker diarization and multi-speaker workflows
- Accessibility and transcription platforms
- Voice interfaces integrated into AI agents or applications

Technology:

Speechmatics provides highly accurate **real-time speech-to-text APIs** designed for conversational AI, live transcription, and production-grade voice applications.

Key capabilities include:

- **Real-time transcription APIs** optimized for conversational AI and live applications
- **Speaker diarization** for multi-speaker conversations and meeting workflows
- **Batch transcription support** for uploaded audio and recordings
- **Developer-ready APIs and examples** with documentation, SDKs, and GitHub resources
- **Built for AI agents** and conversational workflows requiring accurate speech understanding

Access to Technology:

Speechmatics will provide **\$200 in API credits per participant** for the hackathon.

- Access is valid for **1 month**
- Credits are available to the **first 200 participants** on a first-come, first-served basis
- The promo code will be announced during the **kick-off stream**

Participants will:

1. Create a Speechmatics account
2. Add a payment card to activate the account
3. Redeem the hackathon coupon code
4. Generate an API key and start building

 A step-by-step credit redemption tutorial video will be shared during the kick-off.

 Resources:

- [Speechmatics Platform](#)
- [Speechmatics Documentation](#)

- [Speechmatics GitHub](#)
- [Speechmatics Academy](#)

Access & Usage Notes

- **Vultr:** Vultr credits are valid for **30 days** during the hackathon. Teams that wish to continue using their infrastructure after the credit period must link a valid payment method to keep their resources active.
- **Google Cloud:** After free credits expire, continued usage of billable Google Cloud services requires enabling billing on your account. Charges only apply if you choose to continue using paid services.
- **Featherless:** Feather Premium access is valid for **1 month from activation**. Access is provided directly by Featherless and subject to their terms and availability.
- **Speechmatics:** Credits are provided directly by Speechmatics and subject to their terms and availability. Participants should delete unused API keys after the hackathon to avoid accidental usage charges. The coupon code will only be shared during the kick-off stream.
- **General:** lablab.ai is not responsible for access provisioning, billing, or third-party platform usage limitations.

★ Best use of Vultr

- 🥇 1st place - 💰 \$5,000 cash and ☁️ \$1,000 in API credits
- 🥈 2nd place - 💰 \$3,000 cash and ☁️ \$1,000 in API credits
- 🥉 3rd place - 💰 \$1,000 cash and ☁️ \$1,000 in API credits

★ Best use of Gemini

- 🥇 1st place - 💰 \$5,000

🥈 2nd place - 💰 \$3,000

🥉 3rd place - 💰 \$2,000

🏆 Trading Performance (PnL)

🥇 1st place - 💰 \$1,800

🥈 2nd place - 💰 \$750

🥉 3rd place - 💰 \$450

🏆 Social Engagement

🥇 1st place - 💰 \$1,200

🥈 2nd place - 💰 \$500

🥉 3rd place - 💰 \$300

🥇 1st place - ⚡ 500 Featherless inference credits + Featherless Claw Pro plan (\$200)

🥈 2nd place - ⚡ 300 Featherless inference credits + Featherless Claw Pro plan (\$200)

🥉 3rd place - ⚡ 100 Featherless inference credits + Featherless Claw Pro plan (\$200)

Judging Criteria

Application of Technology

How effectively the chosen model(s) are integrated into the solution.

Presentation

The clarity and effectiveness of the project presentation.

Business Value

The impact and practical value, considering how well it fits into business areas.

Originality

The uniqueness & creativity of the solution, highlighting approaches and ability to demonstrate behaviors.

Hackathon Details

Join lablab.ai hackathon and innovate using the latest models in the market. Discover all the relevant details below.

Where and when

The start date of the hackathon is mentioned according to the date specified on the hackathon page, cover and schedule. The hackathon will take place on the lablab.ai platform and lablab.ai Discord server.

Who can join?

Everyone is welcome to participate, regardless of previous AI or coding experience! We encourage anyone with a passion for AI or an interest in exploring how it can be used in their field to join.

What about teams?

If you don't have a team, don't worry! You can connect with other participants from all over the world on our dashboard or Discord server. We also recommend checking out our Discord server to find teammates and bounce around ideas. You can join the server [here](#).

How to participate

The hackathon will take place online on lablab.ai platform and [lablab.ai Discord Server](#). Please register for both in order to participate. To participate click the "Enroll" button at the bottom of the page and read our [Hackathon Guidelines](#) and [Getting Started Guide](#).

Get prepared / Use Lablab.ai to Learn About AI

To get ready for the hackathon, visit our [AI Tech](#) pages and read up on all the available technologies. You can also check out our [tutorials](#) page for more information on how to use them. Get a head start on your project by using the resources on lablab.ai!
